Concept Design

Ground Level Plan

- PERIPHERAL LANDSCAPE AREA
Streetscape Edges
- CAR PARK/ ENTRY AREAS
Pedestrian journey to main building
- REST LANDSCAPE AREAS
Escape moments
- PROTECTED Building Courtyards
Pedestrian Pathways

- 01 "The Peripheral" landscape moment. Small landscape area containing planting, shade trees, seating and low walls which are positioned to direct your view out to the Medical City. Important "break out space" near Emergency providing respite for staff, visitors and patients.
- 02 "Karratha Hill" landscape moment (between verges). Small landscape area containing planting, shade trees, seating and low walls which are positioned to direct your view toward the Karratha Hill. Important "break out space" near Ambulatory Care providing respite for staff, visitors and patients. + Subject to larger design.
- 03 "Courtyard" landscape moment. Small landscape area containing planting, shade trees, seating and low walls which are positioned to establish connections back to the city centre and adjacent parklands. Important "break out space" near providing respite for staff, visitors, patients and family gatherings.
- 04 Car park complex spaced to provide shade for people walking between the carpark and the building.
- 05 Main Entry and ED Public Drop-off
- 06 Ambulatory Care Drop-off
- 07 Temporary Screen Screen Van Parking
- 08 Mergers as central courtyard
- 09 Emergency Outdoor Waiting Area
- 10 Ambulatory Care Outdoor Waiting and Therapy Area
- 11 Staff Courtyard
- 12 Pedestrian "spur" connection to city centre

Notes: "rest" area of proposed landscape area is located at the vehicle secondary entry concept suggests a rest on primary landscape works for visitors. A resting area (e.g. bench) as part of a visitor's visit, create a better pedestrian connection for the main campus to the central area of the site.

- provide access to shaded area for staff, visitors, patients and to be equipped with seating.
- use open space to create a resting area (e.g. bench) for the hospital and create a resting area.
- provide an active landscape approach for pedestrians connecting to the city centre and surrounding residential areas.
- use the combination of the verge to create a better connection with parking or outdoor spaces, create a better connection for the hospital and create a better connection to the city centre.

09 Landscape Architecture
Concept Sections

1_ Example landscape moment within 'rest' landscape area

2_ Example "protected" courtyard within building

3_ Typical street interface and periphery landscape zones
