

Karratha, Point Samson & Gnoorea (40 Mile) Foreshore Management Plans

Schedule of Modifications

1. Karratha

- a. The study area boundary being revised in the vicinity of the Karratha City Centre to follow the alignment of the future Northern City Bypass Road;
- b. Table 1 being revised to remove reference to reserves no longer included in the study area (ie. site of the new Health campus);
- c. Reference to basic raw material extraction requiring a licence from the Shire being removed and replaced with a statement that extractive industries over Crown land are determined under the *Mining Act 1972*;
- d. Figures 4 and 5 being revised to refer to the boardwalks as "Possible location for boardwalk/decking".

2. Point Samson

- a. Reference being included to the Department of Health Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009);
- b. Reference to basic raw material extraction requiring a licence from the Shire being removed and replaced with a statement that extractive industries over Crown land are determined under the *Mining Act 1972*.
- c. Note in section 3.2.3 that although the UDLA foreshore masterplan recommends systematic removal of the Tamarisk trees, there are community concerns about this recommendation and that any removal and rehabilitation will only occur when the community is generally in favour of removing of specific trees.
- d. Figure 8 being revised to indicate removal of the Tamarisk trees will only occur when the community is generally in favour of removing trees.

3. Gnoorea (40 Mile)

- a. The implementation action to investigate a water supply for the study area being removed;
- b. Text being included to state that:
 - i. The Shire does not support mining activity that could adversely affect recreation or conservation values associated with coastal recreation nodes;
 - ii. Decisions relating to mining activity on Crown land are made by the Department of Mines and Petroleum, not local government;
 - iii. If exploration licences are granted, then the Shire would expect the Department of Mines and Petroleum to impose conditions that minimise disruption to the recreational use of the area.
 - iv. The Shire will object to any subsequent mining lease applications unless it can be demonstrated that:
 - the impact of mining on recreation and conservation values is acceptable;
 - Aboriginal Heritage and Native Title approvals have been obtained;
 - and
 - v. there will be long-term benefits for the area as a result of the mining.
- c. Reference being made to the agreed Pastoral Lease exclusion over an adjoining portion of Karratha Station (not Mardie Station) effective from 2015 and what this change will mean for the FMP.
